

Business Analysis Report: Global Financial Dataset

1. Data overview

This dataset represents a **Global Retail Banking Portfolio** consisting of 500+ unique customer records . It is designed to facilitate cross-border financial analysis, risk modeling, and fraud detection.

1. Scope and Coverage

- **Geographic Diversity:** The data covers a balanced mix of developed and emerging markets: **India, China, Japan, USA, UK, Nigeria, Italy, Russia, and South Korea.**
- **Demographic Range:** Includes a diverse age bracket (18–75) and gender distribution, reflecting a broad consumer base.
- **Account Types:** Categorized into **Savings, Current, and Credit** accounts to allow for product-specific performance tracking.

2. Key Data Attributes (Metadata)

The dataset is structured into 18 variables, which can be grouped into four categories:

- **Identity & Contact:** Unique UserIDs, Full Names, Emails, and Region-specific Phone Numbers.
- **Temporal Data:** Account Creation Dates and Last Active Dates (spanning from 2010 to 2026) to measure customer "stickiness" and dormancy.
- **Financial Metrics:**
 - * **Income:** 6-digit annual figures.
 - **Balance & Debt:** Current liquid assets vs. liabilities.
 - **Credit Score:** A numerical representation of creditworthiness (300–850 scale).

- **Risk & Status Indicators:** Logic-driven labels including **Risk Category** (Low/Medium/High), **Fraud Flags** (Binary), and **Account Status** (Active, Dormant, Dead)

2. Problem Statements

- **High-Risk Debt Exposure:** A significant portion of the portfolio shows high debt-to-income ratios and low credit scores. Without intervention, these accounts pose a high risk of default, leading to substantial capital loss.
- **Account Dormancy and Churn:** Many accounts are marked as "Dormant" with no activity for over 18 months. This represents "lazy capital" that fails to generate transaction fees or interest for the institution.
- **Fraud Vulnerability:** Data shows a correlation between "Dead" account status and high debt flags. Inactive accounts with high credit limits are prime targets for unauthorized credit utilization.

3. Business Requirements

- **Predictive Risk Segmentation:** An automated system is required to categorize customers into risk buckets (High, Medium, Low) based on credit score and debt. This allows for proactive credit limit adjustments.
- **Customer Re-engagement Strategy:** Stakeholders need to identify the demographics of dormant users. The goal is to design targeted marketing to convert dormant accounts back to "Active."
- **Real-time Fraud Detection Alerts:** The system must flag accounts that meet both "High Risk" and "Fraud Flag" criteria. This ensures security teams can prioritize audits.

4. Proposed Solutions (Excel-Based)

- **Automated Risk Scoring Engine:** Use **Nested IF** or **SWITCH** functions to calculate a "Weighted Risk Score." This transforms raw data into an actionable rating system.

- **Dormancy Aging Report:** Utilize **Pivot Tables** to highlight accounts where the "Last Active Date" is over 365 days old. This provides a clear list for the CRM team.
- **Data Validation Macros:** Develop a **Power Query** to automatically flag "Dead" accounts that still have a non-zero balance. This ensures data integrity and helps in legal recovery.

5. Key Performance Indicators (KPIs)

- **NPL Ratio (Non-Performing Loan):** Percentage of balance held by "High Risk" accounts.
- **ARPU:** Average Revenue Per User across different account types.
- **Dormancy Rate:** Ratio of "Dormant/Dead" accounts to the total active base.

6. Sample Dataset (Batch GLB8000)

UserID	Name	Country	City	Age	Account Type	Balance	Debt	Credit Score	Status
GLB8011	Rohan Mehra	India	Surat	29	Savings	89,500	12,500	740	Active
GLB8012	Mei Lin	China	Xi'an	34	Current	1,120,000	0	815	Active
GLB8013	Kazuo Ishii	Japan	Fukuoka	55	Savings	4,200,000	450,000	690	Active
GLB8014	Chloe Adams	USA	San Diego	27	Credit	5,400	88,000	490	Active
GLB8015	Nigel Wright	UK	Sheffield	48	Savings	12,000	0	710	Dormant
GLB8016	Amara Okafor	Nigeria	Benin City	32	Current	315,000	140,000	580	Active

GLB8017	Paolo Conti	Italy	Verona	41	Savings	62,300	4,500	765	Active
GLB8018	Olga Ivanova	Russia	Omsk	26	Credit	15,200	110,000	520	Active
GLB8019	Min-Ho Song	South Korea	Jeju	39	Savings	2,150,000	15,000	825	Active
GLB8020	Rahul Saxena	India	Lucknow	50	Current	0	45,000	380	Dead

7. Visual Analytics

To effectively monitor these KPIs, the following dashboard structures are recommended:

- **Executive Dashboard:** High-level view of global liquidity and total debt exposure.
- **Regional Risk Map:** Visualizing credit score health by geographic territory.
- **Fraud Monitor:** A filtered list focusing on high-risk flags for immediate investigation.
